

Mac OSX Automator Action for Batch Renaming

4. Confirm all steps and hit 'Run'

2. Transfer these items one at a time in order to create automation >

3. Your File Goes Here

< Check box for multiple folders

< Choose a new file for images

Give new images a new name

1. After downloading workflow choose File> Import> and Select file from desktop.

4 Actions

This is a quick tutorial on renaming entire folders with the Automator in Mac OSX

1. Download Workflow file from blog post.
2. Import the Workflow into Automator. File> Import.
3. Transfer 'Actions' one at a time in order listed to create 4 steps.
 - Step one - Choose your file with images to be renamed.
 - Step two - Leave this as is unless you have any sub-folders to also be renamed.
 - Step three - Select drop menu and choose 'other', this will allow you to create a new folder on your desktop to place the new images into.
 - Step four - Give your new images their new names.
4. Hit 'Run' and wait for the magic to happen.
